(54) TELEVISION RECEIVER

(57) Abstract:

PROBLEM TO BE SOLVED: To allow the user to view an operating state by setting the automatic preset mode automatically at application of power to a television receiver purchased by the user and whose power plug is plugged into a power socket and displaying various information by OSD (on screen display) during the operation or at the end of operation.

SOLUTION: When a power plug 17 is plugged into a power socket and a power switch of a power supply circuit 16 is turned on, the television receiver detects a channel of a broadcast that broadcasts a program based on a synchronizing signal and an AFT voltage and presets automatically it to a nonvolatile memory 10. Then during the preset, a message denoting the operating state and the operating status is displayed on a CRT 3. Furthermore, the preset is entirely finished, a message denoting the end of operation is displayed.
